

**Can banks and/or mobile operators provide the identity infrastructure?
A Visa/CSFI round-table discussion with Tom Gregory (Barclaycard), Tony Fish (AMF Ventures) and Dean Bublely (Disruptive Analysis).**

**To be held on Tuesday September 27, 2011, from 12:30-2:15pm
At Innholder's Hall, 30 College St, London, EC4R 2RH.**

*The sixth round-table of the 2010/2011 Visa Europe Fellowship Programme on
Identity in Financial Services*

We're going to move the Fellowship programme on by shifting from analysing the problems and issues to discussing potential solutions. I don't mean technical solutions -- we have lots to choose from and we know that they work - but more wide-ranging business and social solutions that will provide a practical means to improve the situation for stakeholders. Now, one set of potential solutions are centred on the mobile phone, and more than once in the preceding workshops the idea of banks working with mobile operators has been put forward. Should banks and/or mobile operators provide the identity infrastructure? It's a great topic for a roundtable because it's a live topic: business plans are being formulated as we speak so we're lucky to get three of the best to join us for informed discussion on the topic. They are:

- Tony Fish, an entrepreneur with extensive experience at the intersection of finance and telecommunications and the man behind "[My Digital Footprint](#)";
- Tom Gregory, the head of digital payments at Barclaycard who lives day-to-day at the intersection of electronic money and electronic identity; and
- Dean Bublely, a respected analyst who understands the mobile operators world and writes one of the best telecommunications blogs in the business, [Disruptive Wireless](#).

Attendance is free, but space is limited. So if you or a colleague would like to attend, please let us know by e-mailing sophie@csfi.org.uk or by phoning the CSFI on +44 (20) 7493 0173 as soon as possible. Refreshments will be provided.

Sincerely yours,

David Birch
